

Forklift Fork Positioners

Forklift Fork Positioner - A fork positioner is actually a tool made out of top quality materials intended to be able to withstand the most difficult procedures and work environments. This piece of equipment enables the one driving to be able to operate the forks hydraulically without leaving the seat. Side shifting models have the added ability to laterally position the arms or the entire load so as to facilitate more accurate carrying and placement in a faster and more effective manner.

The only one of its kind fork pocket design could enable the individual operating it to be able to securely swing the unit's forks without any fear of destroying the positioning cylinders. This could allow the operator the option to either perform independent or simultaneous fork movement, depending on the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be transformed into blade positioners on available units.
