There are well over 220 Doosan service and product sales locations operating in Canada and the United States. Also, there are more than 90 independent dealers moving lift truck materials and materials handling equipment. This network helps Doosan Infracore America to aggressively compete in this competitive market. The forklift product line impressively features 63 distinctive versions consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion forklifts. Capacities of these various truck designs range from 3,000 to 33,000 lbs. All vehicles are designed in an ISO 9001 certified facility.

Doosan Infracore America is the fastest expanding forklift business in the North American market, thanks to their stability in maintaining a high degree of customer service quality and optimum product functioning to all Doosan Infracore Lift Truck users. The U.S. forklift division situated in Cleveland has a professional team experienced in Sales, Purchasing, Marketing, Logistical and Technical Support.

Korea's original domestic lift truck market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. started to import assembled lift trucks as part of a nationwide equipment expansion venture. Early product sales of this industrial equipment focused on large business communities, the armed forces and on state-run corporations. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift production plant was successfully completed. Continuous technical instruction grew to become the new focus for improving quality and product development.

Daewoo started the first domestic forklift business in 1967, and rapidly acquired a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's sophisticated technological advancements combined with sales success placed them in a situation of significant expansion of their forklift operations.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a cooperative venture project to help them in the very competitive North American materials handling industry. This project proved highly successful for Daewoo and their forklift product sales expanded greatly. In 1984, the company completed development of a new facility to help in producing high end value-added products for export. In 1993, the company had a international sales system and started exporting models they had developed through in-house technology, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into international markets.
